■ electronic powered
multifunction pump

9000e - 14000e - 16000e

Sicce has taken the synchronous motor to the highest level in the industry with our NEW 9000, 14000 & 16000 l/h models. These pumps have a maximum head height of over 8 metres and maintain the low power consumption and

extremely high performance standards of all Sicce engineered products. They can also function both submersed or out of water. (Dry & Wet).

MULTI 9000e

The Multi 9000e is equipped with a unidirectional electronic start-up system. The system is capable of determining the correct direction of

rotation of the impeller if the pump should start-up in the incorrect direction. The system continues carrying out the necessary attempts to individualize the correct operating direction.

MULTI 14000e - 16000e

The Multi 14000e, 16000e are equipped with a unidirectional electronic start-up system, with the control of torque. The system determines with priority the correct

sense of direction of the impeller, and permits a gradual start-up of the pump until it reaches normal operation. Thanks to this system, the pumps obtain higher performances with respect to the previous models.

(IN POND APPLICATIONS ONLY WITH SPONGE PREFILTER)

Multi_9000e	
Volt 230 ~	Volt 120 ~
